Frontage Toxicology Studies Task Scheduler Instructions for Deployment

Setting up the database

1. Run the database script *Frontage SQL database scripts.sql*
2. Modify the script *colors.sql* to your needs (if needed) and execute it.
3. Modify the script *adminuser.sql* to include your desired default and password and execute it. Ensure the password is inserted within the "HASHBYTES('SHA2_512', …) function.
   a. The admin user is not editable in the program. Any changes to this user need to occur directly within the database.
4. Modify the script *addtasktype.sql* to include your required task types and execute it.
   a. Task types can be removed at any time by modifying and executing the *deletetasktype.sql* script.

Executing the program

1. Open the project solution in Visual Studio and navigate to the *DBUtilsForScheduler.cs* file.
2. Modify the connection string on line 19 to reflect the connection to your database server.
3. Save the file and run the program. You should be able to log in using the admin username and password you specified before.

Setting up the program

1. From the Main Form, click on the "Admin Dashboard" button in the bottom right corner.
2. Click "New" and enter the information of the user that will be using the software. Hit "Save" when done. This newly created user should now be able to log in and begin using the software.
